PROFILE

As a proficient Full Stack Developer, I have practical expertise with **React.js, Node.js, MySQL, Next.js, Express, and Tailwind CSS** to create dynamic, high-performing web apps. I began as an intern in 2025 and progressed swiftly by working on a variety of customer projects and developing userfriendly, secure, and responsive websites that satisfy particular business requirements. I have experience with every stage of the development process, from frontend implementation and deployment to database design and backend architecture. Renowned for producing quick-loading websites that put security and performance first, I'm dedicated to growing as a developer and learning new things constantly, aiming for perfection on every project.

WORK EXPERIENCE

Nael Produnction   2024- PRESENT

Full Stack Developer (Node.js, React, MySQL)

- Executed React.js, Node.js, MySQL, Next.js, and Tailwind CSS client projects, which were well received by both sides due to their distinct visual appeal and problem-solving interaction.
- Implemented website designs, collected feedback from customers, and incorporated necessary changes to launch secure, reliable, and effective websites.
- Through judicious coding techniques, performance tuning, and error-free operation, the website was optimized for performance.
- Through the design and management of MySQL relational databases, data visualization was realized, and the performance was ensured by efficient data modeling and SQL DDL commands.
- Backend systems secured with Node.js and Express were also utilized, in such a manner they not only included API development but also decentralized user authentication and data security protocols.
- They also made sure that only the best safety principles and practices were put in place, such as secure data communication, validation, users' authentication, and so on.
- The team of professionals without any duplication of roles was at the core of the process of creating user-friendly web applications that fully satisfied the needs of the clients and business objectives.
- They deployed websites on AWS, Heroku, and Vercel, and were also in charge of integrating, making sure the user interface was conformant, and updating the system.
- In addition to this, they were always aware of the server's performance, they optimized the response time whenever there was a need for it, and they also made use of CDNs in order to enhance the loading speed and subsequently, the user experience of the websites.
